## SURVEY 5: Graduating students' Satisfaction Survey (May~2021)

## Introduction

- The Department of Languages and Translation specifically aims at enhancing the graduates' language skills and other core skills. The department concentrates on graduates and providing opportunities to achieve professional skills.
- The English language and literature program conducted via Graduating student's satisfaction survey in May 2021 (second term of the academic year 1442).
- The survey targeted all graduate students in academic year 1441 in English and literature program.
- The survey is electronic, developed using Google form, which consists of 29 items. The survey is administered to both male and female graduate students.
- This survey is implemented online, and the participation was voluntary. All respondents were ensured for confidentiality.

## Results and recommendations:

- The results show that most respondents are females (59, 78.6\%), whereas male respondents around $(16,31 \%)$. This is not surprising as the program has more Female students than males in the academic year 1441/ 1442.
- The respondents are very satisfied in overall, as the average rate is 4 out of 5 .
- There is no significant difference between male and female students in all items. The level of satisfaction across the questionnaire elements was presented in appendix 1.
- It is also noted that Question 25, 26, and 17 (pertaining to the language labs, and the availability of software) had comparatively lower scores (3.72, and 3.66 respectively) than the rest obtained for other questions. This score is not surprising since the survey was administered during the Covid $\sim 19$ outbreak where learning/teaching process were shifted from traditional instruction to remote teaching. Other issues related to health practices were given higher priorities in spending. However, this suggest that language labs need to be improved through regular maintenance, and it should be equipped with needed softwares.
- The results also reveal that teaching staff should effectively integrated technology in teaching when it is possible. This may require some training programs for the staff in using technology in teaching.

## Appendix One

Overall Percentage: Graduating students' Satisfaction Survey

| Gender | Overall Percentage |
| :--- | :--- |
| Male $(\mathrm{N}=16)$ | 4.02 |
| Female $(\mathrm{N}=59)$ | 4.05 |
| Average | 4.04 |
| Overall Percentage | 4 |

Overall Percentage Graduating students' Satisfaction Survey

| Gender | Question No:1: The program helped me develop my critical <br> thinking and problem solving skills |
